In 2007 the 123<sup>rd</sup> Maine Legislature charged the Maine Department of Labor to calculate a livable wage for Maine households. An estimate of livable wages for working households was first published by the Maine Center for Economic Policy for 1999, and again for 2002, 2004 and 2006. The 2007 legislation shifted responsibility from MECEP, a private non-profit organization, to the Maine Department of Labor and specified the use of MECEP methodology in future calculations. The following is a report of Maine livable wages for 2010.

## **Why a “Livable Wage”?**

MECEP developed its estimate of livable wages in response to growing recognition that neither the federal poverty level (a common measure of economic well-being) nor the minimum wage provides a reasonable standard of livability for many Maine families.

The federal poverty level is based on calculations made in the early 1960s, updated annually for price changes using the Consumer Price Index. The underlying assumption is that food costs are equal to one-third of household income.<sup>1</sup>

Since it was first introduced in 1938, debate about the minimum wage has divided lawmakers along political, financial and ideological lines. Increases have been sporadic and have not kept up with inflation, diminishing the minimum wage’s effectiveness as a means to ensure a minimal standard of living. Since 2002, Maine’s minimum wage has consistently exceeded the federal minimum wage.

An alternative measure of income adequacy is one that covers the costs of a basic needs budget that accounts for today’s actual living expenses: a “market basket” of personal and household expenses. The market basket approach allows for variation by household composition and by region.

## **Livable Wage Methodology**

The methodology developed by MECEP begins with a monthly basic needs budget consisting of seven expense categories: food, housing, transportation, health care, child care, clothing, and personal care. Monthly expenses are annualized and then tax liability is calculated. Required annual income equals expenses plus taxes. Livable wage is expressed as an hourly rate based on full-time employment (52 weeks x 40 hours per week).

Expenses to meet basic needs vary by family size and composition, by work status of adults in the household, and by region. Livable wage is estimated for 21 regions: statewide, by county, and by metropolitan area: Bangor, Lewiston-Auburn, Portland, and York-Kittery-South Berwick. In each region, livable wage is estimated for five representative household types<sup>2</sup> :

- a single adult
- a single adult with one child (pre-school)
- a single adult with two children (preschool and school age)
- two adults/one wage earner with two children (preschool and school age)
- two adults/two wage earners with two children (preschool and school age)

---

<sup>1</sup> The initial calculation was based on a 1955 Agriculture Department survey finding that, for families of three or more persons, food costs accounted for one-third of income after taxes. The cost of an economy food plan published in 1962 was multiplied by three to arrive at a threshold for a family of three or more, with adjustments for smaller households. Found 09/16/09 at <http://aspe.hhs.gov/poverty/faq.shtml#developed>

<sup>2</sup> For budget items that vary in cost by gender, the single adult is assumed to be female, the two adults are assumed to be male and female, and the single earner is assumed to be male.

In accordance with past methodology, household expenses are not reduced by presumed eligibility for programs such as food stamps, rent subsidy or fuel assistance, with one exception: MaineCare's Cub Care health insurance program for children. Eligibility for Cub Care is determined for each household type and region, and participation is assumed for all found eligible.

Past methodology also makes the assumption that all workers have access to health insurance coverage through their employer. MDOL recognizes that some wage earners, particularly those working at lower-wage jobs, do not have access to health insurance through their employers.

## **How are Expenses Calculated?**

**Food:** The U.S. Department of Agriculture publishes a monthly estimate of the cost of food using four representative food plans at different cost levels. The USDA plans reflect the estimated cost of a balanced diet and do not include allowances for take-out, fast food or restaurant meals; the plans reflect what it costs to adequately meet nutritional needs, not typical consumer behavior.

The livable wage uses the "low-cost plan" to estimate typical food costs, averaging monthly amounts from January through December. The resulting monthly average is then adjusted to reflect regional variations from the national average. A regional differential for the Northeast is calculated from the annual Consumer Expenditure Survey. No urban/rural cost differential is assumed.

*In 2009, food costs in the Northeast region were calculated to be 9.5 % higher than the average for all regions.*

**Rent/Utilities:** The U.S. Department of Housing and Urban Development compiles annual Fair Market Rents by county and by HUD-designated metropolitan areas. Maine's HUD metropolitan areas are: Lewiston/Auburn, Portland, Bangor, and York/Kittery/South Berwick. Rents include utility costs except for telephone. Statewide average rent is calculated as a population-weighted average of the regions.

For the livable wage, the single person household budget is calculated using the cost of a one-bedroom apartment, all other household budgets are calculated using the cost of a two-bedroom apartment.

*In 2010, there was no difference in fair market rent between the Lewiston-Auburn MSA and Androscoggin County.*

**Telephone:** Representative local and long distance plans and monthly costs are provided by Maine's Public Advocate Office, based on the annual Rate Watcher's Guide. For a single household, the monthly calculation is equal to local service, long distance service, and taxes. For a family household, the calculation is equal to local service, long distance service, 60 minutes in-state long distance, and taxes.

*In 2010, the local service plan used for calculation was Fairpoint; for long distance service, Pioneer.*

**Health Care:** It is assumed that all wage earners have access to a health care plan through their employment. A representative health plan is selected based upon the highest market share among small group plans in Maine, as calculated by Maine's Bureau of Insurance in their "market snapshot" and "consumer guide" health insurance publications. Data on per capita out-of-pocket expenditures are compiled and updated annually by the U.S. Department of Health and Human Services' Centers for Medicare and Medicaid Services as part of National Health Expenditure Projections. Employee contribution rates are the latest available survey results found at [statehealthfacts.org](http://statehealthfacts.org), a project of the Kaiser Family Foundation.

If family income falls within 200% of the poverty level, it is assumed that the family will participate in MaineCare's Cub Care health insurance program for children, and that eligible families will not insure dependent children on employer-provided health insurance plans.

*In 2010, the Anthem Blue Cross/Blue Shield PPO policy was used as the representative plan; the out-of-pocket expenditure allowance projection was \$930 per year; employee contribution rates were 19 percent to 28 percent depending on plan coverage. The Cub care premium was \$32 per child per month (\$384 per year).*

**Transportation:** Data on transportation are calculated using the Internal Revenue Service standard mileage rate multiplied by average miles driven. Data on miles per licensed driver by gender and age are compiled by the National Household Travel Survey.

Mileage per driver is discounted according to the survey's breakdown of household mileage by travel purpose. The survey estimates that 30 percent of typical household travel is social and recreational, which is excluded from the livable wage transportation calculation. When calculating mileage for a second earner, only commuting miles are counted.

*The 2010 IRS standard rate for business travel was \$.50 per mile.*

**Child Care:** Child care rates are from Maine's Department of Health and Human Services annual survey, Maine Child Care Workforce Climate Report and Market Rate Analysis. For the livable wage calculation, the less expensive "family child care" rates are used. It is assumed that full-time care is needed for a pre-school child; for a school-age child, before/after school care and ten weeks of full-time summer care. Monthly costs are calculated on a 52-week basis due to the fact that many parents have child care contracts and pay for care even when they may be taking vacation time.

*As of December 15, 2011, statewide rates and after-school care rates for 2010 were not yet available. In the absence of survey-based data, the 2010 state-wide rates are weighted averages of county-level data, and after-school rates are unchanged from 2008.*

**Clothing, Household Goods and Personal Care:** Data are from the U.S. Bureau of Labor Statistics Consumer Expenditure Survey, Northeast Region. Data for the \$20,000-29,999 income range are used for all households. The calculation includes the cost of clothing for each person, footwear and personal care for each adult, apparel products and services for each earner, and housekeeping and household furnishings and equipment (minus major appliances, assumed to be included in rented apartment) for each household unit.

**Tax Calculation:** It is assumed for the purposes of estimating state and federal tax liability that all filers take advantage of tax credit and rebate programs for which they are eligible. Livable wage is the hourly wage necessary to equal, on an annual basis, a basic needs budget plus tax liability. In the case of a net negative tax (refund), the livable wage may be *less than* the basic needs budget.

*In 2010, credit and rebate programs include the federal Earned Income Credit (EIC), the dependent care tax credit of up to \$3000 (one child) or \$6000 (more than one child), and the Maine Residents Rent Refund Program (up to \$2000 to eligible renters).*

## 2010 Livable Wage Estimates for Maine Households

Maine's statewide average livable wage ranges from a low of \$11.02 per hour for a single-person household to a high of \$21.89 per hour for a three-person household. Among households that don't incur child care expenses, about 50 percent of the household budget goes to food and rent and 12 to 20 percent to health care. Among households that pay for child care, about 40 percent of the budget goes to food and rent, and another 40 percent to child and health care.

On average, a single adult with two children requires the highest hourly wage (\$21.89) to make ends meet on a basics needs budget. The largest proportion of household budget goes to child care (26 percent), followed by rent (24 percent). Because income needed to cover expenses plus taxes exceeds the income guideline, this household does not qualify for Cub Care. Consequently, the cost of health care and child care combined claim 42 percent of the budget, the highest share paid among households with children.

MAINE STATEWIDE AVERAGE 2010 Monthly Basic Needs Budgets by Family Size (in dollars)					
	Single adult	Single adult, 1 child <sup>1</sup>	Single adult, 2 children <sup>2</sup>	Two adults, (1 earner) 2 children	Two adults, (2 earners) 2 children
Food	206	340	525	769	769

## Estimated Livable Wage by Region

Variations in livable wage across regions are due to underlying differences in rent and child care costs, the only budget lines for which regional data are available. In areas where rent and/or child care expenses are relatively high, higher income is required to cover costs, which in turn can increase tax burden. The combined effect on income needed to cover expenses can trigger a series of further adjustments to expenses and taxes that result in a differential in livable wage that is greater than the initial cost differential. This “cliff effect” is discussed in a following section.

2010 ESTIMATED LIVABLE WAGE in Maine Counties and Metropolitan Areas by Family Size (in dollars per hour)					
COUNTY/REGION	Single adult	Single adult, 1 child <sup>1</sup>	Single adult, 2 children <sup>2</sup>	Two adults, (1 earner) 2 children	Two adults, (2 earners) 2 children per earner <sup>3</sup>
Statewide	11.02	18.21	21.89	17.15	13.35
Androscoggin	10.22	16.78	17.37	15.20	12.64
Lewiston-Auburn Metropolitan Area	10.22	16.78	17.37	15.20	12.64
Aroostook	9.90	12.07	14.43	14.80	10.04
Cumberland	11.35	19.81	23.82	16.97	14.30
Portland Metropolitan Area	12.53	21.40	25.45	18.59	15.13
Franklin	10.25	13.08	15.51	15.22	11.98
Hancock	10.98	17.52	21.24	15.83	13.03
Kennebec	10.08	13.35	16.08	15.13	12.23
Knox	11.18	17.94	21.85	15.94	13.33
Lincoln	11.08	18.69	21.94	17.01	13.38
Oxford	10.37	13.28	16.21	15.61	12.27
Penobscot	10.18	14.00	17.11	15.60	12.55
Bangor Metropolitan Area	10.78	17.86	21.42	16.98	13.12
Piscataquis	10.67	17.31	17.53	16.57	12.71
Sagadahoc	11.43	18.83	22.78	17.49	13.79
Somerset	10.05	12.54	15.29	15.32	11.87
Waldo	10.94	17.50	21.54	16.79	13.18
Washington	10.26	17.88	21.14	15.67	12.98
York	11.14	19.04	23.03	17.54	13.92
York-Kittery-South Berwick Metropolitan Area	12.43	20.24	24.27	21.40	14.53
NOTE: Shaded cells denote households eligible for Maine's Cub Care health insurance program, reducing estimated health care costs by up to 49%.					
<sup>1</sup> pre-school					
<sup>2</sup> pre-school and school-age					
<sup>3</sup> This hourly wage is the average wage that each adult must earn in order to equal the required household annual income.					
Source: Maine Department of Labor, Center for Workforce Research and Information, Dec 2011					

Across all household types, the livable wage is highest in the Portland and York-Kittery-South Berwick metropolitan areas and lowest in Aroostook and Somerset counties. However, the differential between high and low varies significantly by household type.

The range across regions for a single person household is relatively narrow, from a low of \$9.90 per hour in Aroostook County to a high of \$12.53 in the Portland metropolitan area. The range from low to high is slightly greater for four-person households with one earner, \$14.80 in Aroostook County to \$21.40 in the York-Kittery-South Berwick metropolitan area. Neither of these household types budget for child care.

Among households that budget for child care, the greatest range from low to high is in three person households (single parent with two children). The livable wage for these households ranges from \$14.43 per hour in Aroostook County to \$25.45 in the Portland metropolitan area, a difference of \$11.02 per hour or \$22,918 per year.

Tables detailing basic needs budgets for each region appear in the Appendix.

### **Cliff Effects**

A cliff effect occurs when a family receives some government benefit at one level of income and then becomes ineligible for that assistance when their income increases. Unless the benefit is slowly phased out at higher income levels, a “cliff” can occur where much more income is needed to cover the loss of a government benefit. Such benefits can include publicly subsidized health care, earned-income tax credit or renter’s property tax credits – all programs reflected in the 2010 livable wage calculations.

Consider similar households with incomes just above or just below Maine’s Cub Care income guideline, 200 percent of federal poverty level. In 2010, a single parent with one child qualifying for Cub Care paid an estimated \$220 per month for health care compared to \$448 without Cub Care, a difference of \$2,737 annually. The impact of an incremental change in income can be compounded and amplified by resulting adjustments to expenses and tax liability.

An example of a cliff effect is the difference in estimated livable wage between a household of two (parent and child) in Somerset County (\$12.54) and a similar household in neighboring Piscataquis County (\$17.31). Regional differences in average rent and child care expenses add an initial \$2,532 to the Piscataquis County household’s basic needs budget, initiating a series of adjustments to expenses, to estimated taxes and to required annual income. The cumulative impact is a difference of \$9,914 in annual income or \$4.77 in equivalent hourly wage.

Estimates of livable wage reveal significant differences from household to household and from region to region. They provide an additional tool for policy makers in the design and evaluation of measures intended to support and assist Maine families and offer a glimpse of the challenges faced by some Maine families.
